

THE EXTRA MILE

Engine Building and Power Techniques

BY SCOTT SEHR

The Extra Mile.

What's that? Here at Sehr Performance Machine we have our own definition. To us it means going farther and doing more to insure that our customers get a better, finished product. We take the extra, often overlooked, steps and perform the extra checks and measurements so our customer gets every bit of performance that they pay for. As professionals we feel compelled to help our customers work through the process so they don't find that in the end; something was overlooked. There's a lot of chatter on the internet about what works and what doesn't and frankly most of it isn't even a theory, it's just noise and myth. We sort that all out for our customers as well. I guess you could say it's about helping them spend their money wisely so they get more bang for their buck.

The days of doing this under the shade tree are gone. Engine machining and engine building is far more complex than it ever has been and is continually evolving. As such the average hot-rodder / racer is not able to keep up with the technology and the changes and may soon find themselves in way over their heads. That's where Sehr Performance comes in. We do this every-day and stay abreast of the changes in materials, techniques and technology.

We ask our customers a lot of questions to make sure that they are getting the right engine for their application. Our goal is to build them what they want, not to sell them something we have already built and that requires that we go 'The Extra Mile'.

This monthly series will be informative and give the readers an insight into how we strive to make their journey less stressful. We will be taking you down the road that leads to a first class engine build. On this journey we will be stopping once a month to explain the steps from picking the right core, the machining processes, engine assembly right through to the final dyno pull. This little trip will include pictures of the processes and we will tell you why each step we take is necessary and the benefits gained. We will also explain why the extras, included with every job we do, result in a better build and puts a Sehr engine a step above the rest. So buckle-up, get comfortable and come along for 'The Extra Mile'.
